**RE: SUBMITTAL OF PHASE II PRELIMINARY WORK PLANS
COLBERT LANDFILL REMEDIAL DESIGN/REMEDIAL ACTION PROJECT**

Enclosed are the Colbert Landfill Remedial Design/Remedial Action Phase II Preliminary Work Plans. These plans were prepared for Spokane County by Landau Associates, Inc. to fulfill the Project Consent Decree submittal requirements. These work plans include:

- The Phase II Preliminary Groundwater Monitoring Plan
- The Phase II Preliminary Extraction Well Plan
- The Phase II Preliminary Treatment and Discharge Plan

These preliminary plans represent 30 percent design for the Colbert Landfill Phase II (final) remedial action. However, the well placement and design aspects of the monitoring and extraction systems (presented in the Phase II Preliminary Groundwater Monitoring Plan and Preliminary Extraction Well Plan, respectively) represent 90 percent design for these Phase II system components. Well installation is a critical path item for Phase II construction, and it is necessary to initiate well construction by about June 1992 to keep remedial action implementation on schedule. Consequently, Spokane County requests that Ecology and EPA provide approval (to Spokane County) to proceed with Phase II well construction following review of the Phase II preliminary plans, or identify the specific issues that must be addressed prior to providing such approval.

USEPA SF

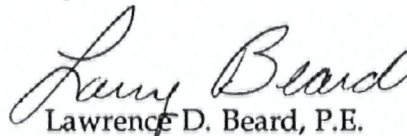

1414465

As identified in the Schedule for Submittal of Deliverables, Ecology and EPA comments on the preliminary plans should be provided to Spokane County within 30 days of plan submittal. As such, we anticipate receipt of review comments by mid-April. Please contact Dean Fowler (Spokane County) or myself, should any questions arise during your review of these preliminary plans. We look forward to the continued cooperation and interaction with Ecology and EPA that has help keep the Colbert Landfill Project on schedule.
